

# FASCARD APP - CURRENT INFORMATION ARCHITECTURE

The current FasCard App lacks a dedicated home screen, dependning instead on a main menu bar. This type of navigation is creating the current layered / linear flow.

# FASCARD APP - REVISED INFORMATION ARCHITECTURE

The proposed information architecture introduces a dedicated home screen, MY ACCOUNT. The user will always be able to return to this home screen regardless of the page that they are currently viewing. To avoid users adding value to the wrong location, this option isn't available until they have already accessed a location through the MY LOCATIONS submenu.

Based on the assumption that the user is most likely in a laundromat while setting up a new account, this diagram also proposes that when creating a new account, the user is immediately prompted to link their laundry card to their account or scan the machine that they want to use, immediately linking them to the location that they are in.
